

The Nicotine Products Prevention Module

Implementation Guide

Module Contents: www.vfhy.org/programs/tobacco/nicotine-products-prevention-modules

- 1 PowerPoint Presentation with notes slides/script
- 1 Handout for Students
- Pre and Post-test Surveys

Grade Level: Middle & High School Students

Learning Objectives:

1. Increase awareness and knowledge of Nicotine Products.
2. Increase awareness and knowledge of the addictive qualities of nicotine.
3. Increase awareness and knowledge of toxic chemicals found in Nicotine Products.

Implementation Guidelines:

- *The Nicotine Products Prevention Module* can be presented on its own or as an add-on with other tobacco use prevention efforts.
- The PowerPoint presentation is approximately 15-25 minutes long.
- Each slide has notes that serve as a script for the instructor to read. Instructors should familiarize themselves with the content to avoid “dry” readings and to more fully engage students.
- At the conclusion of the presentation and optional post-test survey, students should be given the handout as a takeaway.

Evaluation:

- Optional pre and post tests are included as part of the module. They may be administered to measure student gains in knowledge about Nicotine Products. Student names are not required and all evaluation surveys should remain confidential. Each survey takes less than 5 minutes to complete.
- The pre-test survey should be administered immediately before the PowerPoint presentation and collected.
- The post-test survey should be administered immediately after the PowerPoint presentation and collected.
